
CAPSTONE PROJECT

THE BATTLE OF NEIGHBORHOODS

INTRODUCTION

- **Background:** The average American moves about eleven times in their lifetime, safety is a top concern when moving to a new area.
- **Problem:** Explore the neighborhoods of that borough to find the 10 most common venues in each neighborhood and finally cluster the neighborhoods using k-mean clustering.
- **Interest:** Expats who are considering to relocate to London will be interested to identify the safest borough in London and explore its neighborhoods and common venues around each neighborhood.

DATA ACQUISITION AND CLEANING

Data acquisition (3 main sources)

- London crime data that shows the crime per borough in London
- Wikipedia page that contains the list of London boroughs, and additional information.
- The list of Neighborhoods in the Royal Borough of Kingston upon Thames as found on the Wikipedia page.

DATA CLEANING

- The data preparation for each of the three sources of data is done separately. From the London crime data, the crimes during the most recent year (2016) are only selected.
- The second data is scraped from a Wikipedia page using the Beautiful Soup library in python. Using this library, we can extract the data in the tabular format as shown in the website.
- The two datasets are merged on the Borough names to form a new dataset that combines the necessary information in one dataset .
- After visualizing the crime in each borough, we can find the borough with the lowest crime rate and hence tag that borough as the safest borough.
- The new dataset is used to generate the 10 most common venues for each neighborhood using the Foursquare API, finally using k means clustering algorithm to cluster similar neighborhoods together.

statistics of the London crime data, this returns the mean, standard deviation, minimum, maximum, 1st quartile (25%), 2nd quartile (50%), and the 3rd quartile (75%) for each of the major categories of crime .

Comparing five boroughs with the highest crime rate during the year 2016 and five boroughs with the lowest crime rate.

There are 15 neighborhoods in the royal borough of Kingston upon Thames, they are visualized on a map using folium on python

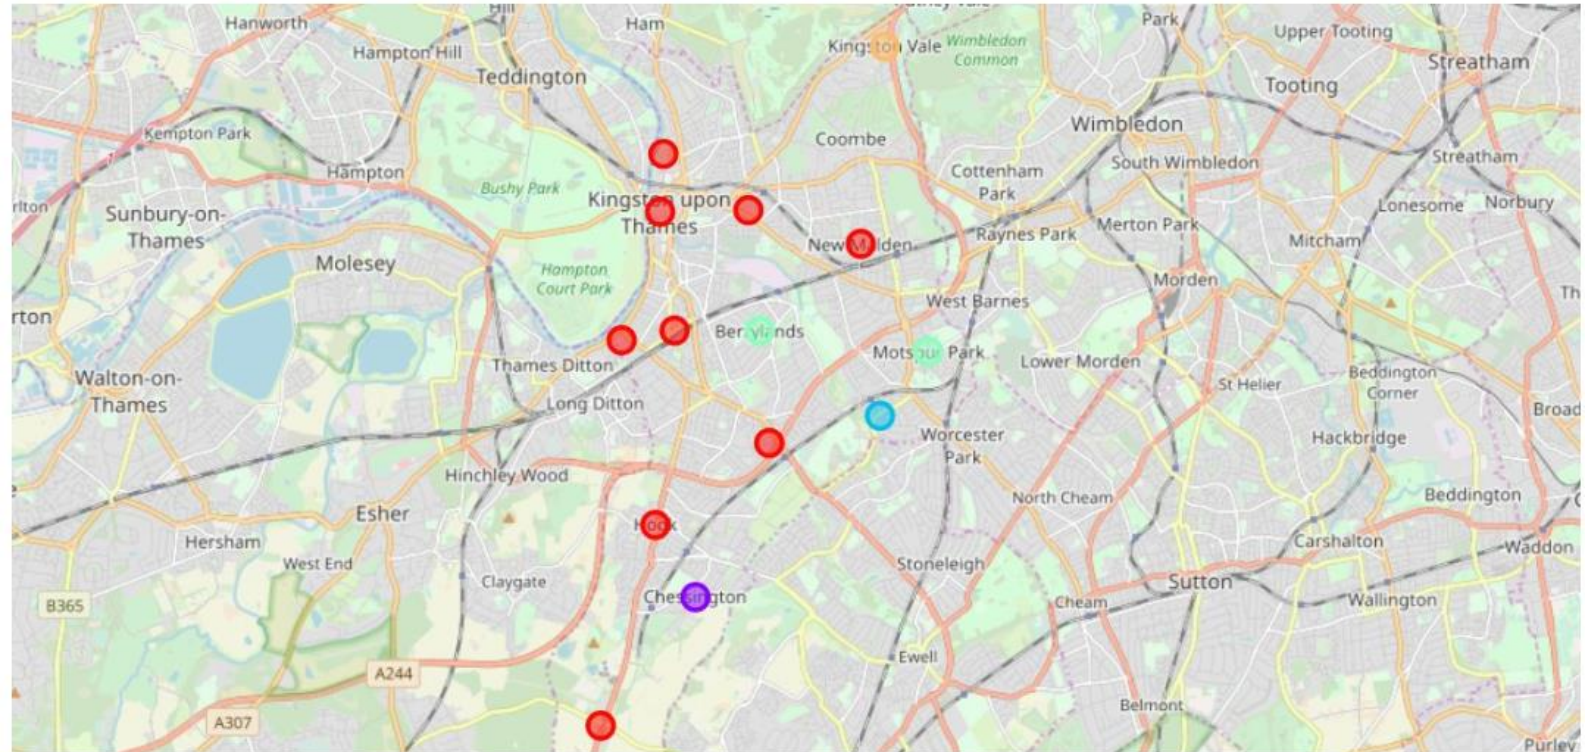

MODELLING

	Neighborhood	Neighborhood Latitude	Neighborhood Longitude	Venue	Venue Latitude	Venue Longitude	Venue Category
0	Berrylands	51.393781	-0.284802	Surbiton Racket & Fitness Club	51.392676	-0.290224	Gym / Fitness Center
1	Berrylands	51.393781	-0.284802	Alexandra Park	51.394230	-0.281206	Park
2	Berrylands	51.393781	-0.284802	K2 Bus Stop	51.392302	-0.281534	Bus Stop
3	Berrylands	51.393781	-0.284802	Cafe Rosa	51.390175	-0.282490	Café
4	Canbury	51.417499	-0.305553	The Boater's Inn	51.418546	-0.305915	Pub

- One hot encoding is done on the venues data. The Venues data is then grouped by the Neighborhood and the mean of the venues are calculated, finally the 10 common venues are calculated for each of the neighborhoods.
- To help people find similar neighborhoods in the safest borough we will be clustering similar neighborhoods using K - means clustering which is a form of unsupervised machine learning algorithm that clusters data based on predefined cluster size.
- We will use a cluster size of 5 for this project that will cluster the 15 neighborhoods into 5 clusters.

RESULTS

- After running the K-means clustering we can access each cluster created to see which neighborhoods were assigned to each of the five clusters.
- Visualizing the clustered neighborhoods on a map using the folium library

Cluster 1

The cluster one is the biggest cluster with 9 of the 15 neighborhoods in the borough Kingston upon Thames. Upon closely examining these neighborhoods we can see that the most common venues in these neighborhoods are Restaurants, Pubs, Cafe, Supermarkets, and stores.

DISCUSSION

- The aim of this project is to help people who want to relocate to the safest borough in London, expats can choose the neighborhoods to which they want to relocate based on the most common venues in it.
- If a person is looking for a neighborhood with good connectivity and public transportation, we can see that Clusters 3 and 4 have Train stations and Bus stops as the most common venues.
- For a family, the neighborhoods in Cluster 4 are more suitable due to the common venues in that cluster, these neighborhoods have common venues such as Parks, Gym/Fitness centers, Bus Stops, Restaurants, Electronics Stores and Soccer fields

CONCLUSION

- This project helps a person get a better understanding of the neighborhoods with respect to the most common venues in that neighborhood.
- We have only taken safety as a primary concern to shortlist the safest borough of London.
- The future of this project includes taking other factors such as cost of living in the areas into consideration to shortlist the borough, such as filtering areas based on a predefined budget.
